AN XRD SCAN IN 1 MINUTE?

Rigaku MiniFlex™ benchtop XRD can be equipped with the D/teX Ultra high-speed 1-dimensional detector for much higher counting rates. By using this detector, it is possible to measure intensities that are a few tens to roughly 100 times greater than is possible with an attenuator or the tube current limitations required when using a conventional scintillation counter detector. This enables dramatic shorter measurement times. The D/teX Ultra detector also measures data faster because it can simultaneously view a wide range of 2-theta with excellent angular resolution.

Mineral sample measurement conditions: Scan range: $2\theta = 10 \sim 70^\circ$, Step width: 0.02° , Scan speed: $80^\circ / \text{min.}$ (about 1 min.)
