

Elements

An International Magazine of Mineralogy, Geochemistry, and Petrology

Volume 13, Number 4 • August 2017

COVER IMAGE: The flame created from ignition of trimethyl borate in air is colored by emission bands peaking at 548 nm. This intense green flame is diagnostic for substances that contain boron. PHOTO CREDIT: MICHAL HEGEDÚS, P.J. ŠAFÁRIK UNIVERSITY (SLOVAKIA)

Elements is published jointly by the Mineralogical Society of America, the Mineralogical Society of Great Britain and Ireland, the Mineralogical Association of Canada, the Geochemical Society, the Clay Minerals Society, the European Association of Geochemistry, the International Association of GeoChemistry, the Société Française de Minéralogie et de Cristallographie, the Association of Applied Geochemists, the Deutsche Mineralogische Gesellschaft, the Società Italiana di Mineralogia e Petrologia, the International Association of Geoanalysts, the Polskie Towarzystwo Mineralogiczne (Mineralogical Society of Poland), the Sociedad Española de Mineralogia, the Swiss Society of Mineralogy and Petrology, the Meteoritical Society, and the Japan Association of Mineralogical Sciences. It is provided as a benefit to members of these societies.

Elements is published six times a year. Individuals are encouraged to join any one of the participating societies to receive *Elements*. Institutional subscribers to any of the following journals—*American Mineralogist*, *Clay Minerals*, *Clays and Clay Minerals*, *Mineralogical Magazine*, and *The Canadian Mineralogist*—also receive one copy of *Elements* as part of their 2017 subscription. Institutional subscriptions are available for US\$165 (US\$180 non-US addresses) a year in 2017. Contact the executive editor (jross.elements@gmail.com) for information.
